RE: HydroPoint Water Compass

To Whom It May Concern:

I have been using the HydroPoint WaterCompass for the past 2 years as a water use investigation tool. It easily moves from meter to meter and, once calibrated, provides hourly data that can be viewed remotely via a user friendly online portal. I've been most impressed with the customer support, data analytics and multi-year battery life. I've used the Water Compass on Sensus SRII positive displacement meters and trust it does not interfere with the water meter operation and independent testing supports this.

Sincerely,

A handwritten signature in blue ink that reads "Craig Lauridsen".
